An integrated approach was studied for the control of postharvest diseases of peaches including application of a yeast antagonist (*Candida oleophila*), hot water treatment at 55 C for 10 s, and storage in modified atmosphere at 0 C.

Antimicrobial Activities of *Calotropis procera* on Selected ...

flavus, *Microsporium boulandii* and one yeast *Candida albicans* were determined using agar well diffusion and paper disk methods. The results revealed that ethanol was the best extractive solvent for antimicrobial properties of leaf and latex of *C. procera* followed in order by Chloroform and aqueous (P<0.05). The ethanolic extracts of *C. procera* latex gave the widest zone of inhibition (14.1mm)
