Federated Identity You can use federation for the Identity service (keystone) in two ways: Supporting keystone as a SP: consuming identity assertions issued by an external Identity Provider, such as SAML assertions or OpenID Connect claims.

[Federated Identity | Microsoft Does](#)

Federated identity also has the major advantage that management of the identity and credentials is the responsibility of the identity provider. The application or service doesn't need to provide identity management features. In addition, in corporate scenarios, the corporate directory doesn't need to know about the user if it trusts the identity provider. This removes all the administrative A guide to Federated Identity, Icehouse and beyond - Cloud ...

That said, I've worked on some pretty neat things there, like adding OAuth 1.0a support, had a hand in supporting CADF audit events, and most recently supporting Federated Identity. What is Federated Identity, and why do you keep mentioning it?

[What is Federated Identity Management \(FIM\)? - Definition ...](#)

Federated Identity Management (FIM) is a model that enables companies with several different technologies, standards and use-cases to share their applications by allowing individuals to use the same login credentials or other personal identification information across security domains.
