[Light-emitting diode - Wikipedia](#)

A light-emitting diode (LED) is a two-lead semiconductor light source. It is a p-n junction diode that emits light when activated. When a suitable current is applied to the leads, electrons are able to recombine with electron holes within the device, releasing energy in the form of photons.

[light emitting diode - EIProCus](#)

The Light-emitting diode is a two-lead semiconductor light source. In 1962, Nick Holonyak has come up with an idea of light-emitting diode, and he was working for the general electric company.

[What is light-emitting diode \(LED\)? - Definition from ...](#)

A light-emitting diode (LED) is a semiconductor device that emits visible light when an electric current passes through it. The light is not particularly bright, but in most LEDs it is monochromatic, occurring at a single wavelength.

[How Light Emitting Diodes Work | HowStuffWorks](#)

Light-emitting diodes, commonly called LEDs, are real-unsung heroes in the electronics world. They do dozens of different jobs and are found in all kinds of devices. Among other things, they form numbers on digital clocks, transmit information from remote controls, light up watches and tell you when your appliances are turned on.

[Light Emitting Diode or the LED Tutorial](#)

Before a light-emitting diode can emit any form of light it needs a current to flow through it, as it is a current-dependant device with their light output intensity being directly proportional to the forward current flowing through the LED.

[Light Emitting Diode \(LED\) - Working, Construction and Symbol](#)

A light-emitting diode (LED) is an optical semiconductor device that emits light when voltage is applied. In other words, LED is an optical semiconductor device that converts electrical energy into light energy.

[Light-emitting diode Facts for Kids](#)

A light-emitting diode (LED) is a semiconductor device that produces light from electricity. LEDs last a long time and do not break easily (compared to incandescent lightbulbs). They can produce many different colors.

[What is a Light-Emitting Diode? Siller's LED Supplies](#)

What is a Light-Emitting Diode? To understand light-emitting diodes, we must first look at what a diode is. A diode is the simplest sort of semiconductor device.

Generally, a semiconductor is a material with a varying ability to conduct an electrical current. It is common to

find semiconductors made of poor conductor material that has impurities added to it. Adding the impurities is called
