[What is a Relational Database Management System \(RDBMS\) ...](#)

A relational database management system (RDBMS) is a database engine/system based on the relational model specified by Edgar F. Codd--the father of modern relational database design--in 1970.

[What is RDBMS \(relational database management system\) ...](#)

A relational database management system (RDBMS) is a collection of programs and capabilities that enable IT teams and others to create, update, administer and otherwise interact with a relational database.

[The Advantages of a Relational Database Management System ...](#)

A Relational Database Management System (RDBMS) is a software system that provides access to a relational database. The software system is a collection of software applications that can be used to create, maintain, manage and use the database.

[relational database management systems \(RDBMS\) - Sisense](#)

A relational database management system (RDBMS or just RDB) is a common type of database whose data is stored in tables. You'll find that most databases used in businesses these days are relational databases, as opposed to a flat file or hierarchical database.

[What is relational database? - Definition from WhatIs.com](#)

A relational database is a set of formally described tables from which data can be accessed or reassembled in many different ways without having to reorganize the database tables.

[What is a Relational Database Management System?](#)

A relational database management system, abbreviated RDBMS, is a program that is used to create, update and administer a relational database. It is based on the relational model that was invented by E.F. Codd in 1970. [A comparison of relational database management systems](#)

Relational databases have been in use for a long time. They became popular thanks to management systems that implement the relational model extremely well, which has proven to be a great way to work with data [especially for mission-critical applications].

[Relational database management system - Wikipedia](#)

A relational database management system (RDBMS) is a database management system (DBMS) based on the relational model of data. Most databases in widespread use

today are based on his model.
